

Open Internet Principles of Mid-States Services

The Federal Communications Commission issued rules to preserve the Internet as an open platform. These rules went into effect on November 20, 2011 and can be found at this link: <http://www.gpo.gov/fdsys/pkg/FR-2011-09-23/html/2011-24259.htm>. All Internet service providers are required to post information regarding various issues so that consumers, both residential and business, can make informed choices about choosing an Internet service provider. This document contains information regarding our services and in compliance with the FCC's rules. The policies contained herein serve as a supplement to the existing terms of service.

The FCC's rules focus on four primary issues:

- Transparency. Fixed and mobile broadband providers must disclose the network management practices, performance characteristics, and terms and conditions of their broadband services;
- No blocking. Fixed broadband providers may not block lawful content, applications, services, or non-harmful devices; mobile broadband providers may not block lawful Web sites, or block applications that compete with their voice or video telephony services; and
- No unreasonable discrimination. Fixed broadband providers may not unreasonably discriminate in transmitting lawful network traffic.
- Reasonable network management. ISPs may engage in reasonable network management to maintain a high quality of service for broadband Internet access.

Network Practices

ISPs must disclose their network practices, specifically in the four general areas listed below. ISPs may not block lawful content, applications, services, or non-harmful devices, subject to reasonable network management. An ISP may not block consumers from accessing lawful Web sites, subject to reasonable network management; nor shall the ISP block applications that compete with the provider's voice or video telephony services, subject to reasonable network management. ISPs may not unreasonably discriminate in transmitting lawful network traffic over a consumer's broadband Internet access service, although, reasonable network management shall not constitute unreasonable discrimination. The FCC's rules state that a network management practice is reasonable if it is appropriate and tailored to achieving a legitimate network management purpose, taking into account the particular network architecture and technology of the broadband Internet access service.

Congestion Management:

Mid-States Services uses quality of service controls (“QOS”) to separate data types and prioritize them to different levels. For one example, if a customer is using all available bandwidth and starts a VoIP call, the other data can be limited in favor of VoIP.

Application-Specific Behavior:

Mid-States does not block or discriminate among applications.

Device Attachment Rules:

Mid-States does not limit devices attached to our subscriber modules. On Mid-States network, however, the subscriber module must be supplied and installed by its staff.

Security:

Mid-States network is protected by multiple firewalls and with hacker traps.

Performance Characteristics

ISPs must disclose the following network performance characteristics:

Fixed Wireless Service Description:

Mid-States uses 900MHz, 2.4GHz, 5.8GHz, and 3.65GHz wireless technology to deliver service based on speed packages. Expected speeds average >50% of the purchased Package. Network latency depends on the tower connected to but network average is 70ms and is suitable for VoIP at most locations depending on service and virtual private networks.

Fiber Broadband Service Description

Mid-States Services offer fiber broadband using ADTRAN’s TA5000 and ADTRAN’s 424RG ONT. Expected speeds average > 80% of the purchased package. Network latency is low and is suitable for all VoIP and VPN services at all locations.

Impact of Specialized Services:

None.

Commercial Terms

ISPs must disclose the commercial terms of its broadband Internet access service including those listed below.
